Summary

AI/ML Engineer and Data Analyst with hands-on experience building **production-grade agentic AI systems, autonomous multi-agent pipelines, and data-driven applications**. Proficient in Python, LangChain, RAG architectures, reinforcement learning, and deploying AI agents via FastAPI. Passionate about building AI that executes inside real business workflows with a strong foundation in data analysis, SQL, and end-to-end system delivery.

Education

Marri Laxman Reddy Institute of Technology, Hyderabad, India

B.Tech in Computer Science and Engineering

Expected Graduation: April 2026

CGPA: 7.03

Sri Gayatri Junior College, Hyderabad, India

Intermediate

June 2022

GPA: 8.89

Technical Skills

Agentic AI & LLMs: LangChain, LangGraph, RAG pipelines, Hugging Face, Ollama, llama.cpp, FAISS, NLP, Embeddings, Prompt Engineering

Machine Learning & RL: Scikit-Learn, XGBoost, TensorFlow, GraphSAGE, Proximal Policy Optimization (PPO), Reinforcement Learning

Data Analysis: Python (Pandas, NumPy, Matplotlib, Seaborn), SQL (MySQL, PostgreSQL), Jupyter Notebook, Power BI, Advanced Excel

APIs & Deployment: FastAPI, Flask, REST APIs, Streamlit, D3.js

Cloud & Platforms: Google Cloud Platform (GCP), Oracle Cloud Infrastructure (OCI), Oracle Data Science,

Tools & Systems: Git, Linux, Docker (basic), MS Office Suite

Work Experience

AI/ML Engineer, SCOPE Club, MLRIT

March 2025 – Present

- Designed and deployed a **production-grade RAG chatbot** using MiniLM-L6-v2 embeddings and FAISS for semantic search over organizational data – reducing information retrieval time by ~70%
- Built and deployed a FastAPI backend serving AI agent endpoints; optimized vector indexing to reduce query latency from 100 ms to 5 ms resulting in a 20x improvement
- Designed multi-step agentic workflows integrating LLM reasoning with structured data retrieval, enabling autonomous responses without human intervention on routine queries
- Maintained data pipelines using Python (Pandas, NumPy) to ingest, clean, and transform organizational datasets, reducing data preparation overhead by ~40%

AI/ML Lead, Google Developer Groups on Campus, MLRIT

Sept 2024 – Sept 2025

- Led and mentored 200+ students in building real-world AI/ML projects using Gemini API, LangChain, and Streamlit – guiding 50+ students to completed, deployed applications
- Designed and delivered workshops on agentic AI, LLM integration, and Python data analysis, helping students move from experimentation to production-ready deployments
- Collaborated cross-functionally to produce data-backed engagement and attendance reports using Power BI and SQL, enabling data-driven event planning decisions

Projects

Robinhood Chain EVM Memecoin Sniper (Bullet)

- Built a Rust low-latency memecoin sniper for the Robinhood Chain (Arbitrum Orbit EVM L2) that decodes Uniswap v2/v4 factory logs over websocket ingest to enter new liquidity pools within 4 s of creation, then exits via a gas-aware ladder scale-out with EIP-1559 signing and fail-closed risk controls.
- Architected a 19k-line end-to-end pipeline (chain ingest → entry strategy → risk engine → executor → audit trail) with 214 passing tests and a <1 s p95 pool-event-to-signed-transaction hot-path gate; in a 10-hour paper-trading session the bot grew \$2,000 seed capital by +\$36,825 (469 closed trades), backtested at 65.6% green tokens / +\$40.2 per token after gas.

Autonomous Fraud Detection & Response Network

- Built a fully autonomous multi-agent fraud detection system using GraphSAGE, XGBoost, PPO reinforcement learning, and LFM2.5, achieving 99%+ ROC-AUC on 6M+ PaySim transactions.
- Developed and deployed the end-to-end platform with FastAPI, D3.js, and Tailwind CSS, enabling real-time anomaly detection, fraud response, and explainable stakeholder insights.

Certifications

Oracle Data Platform 2025 Certified Foundations Associate
Oracle Cloud Infrastructure (OCI) 2025 Certified Data Science Professional
Salesforce Certified Agentforce Specialist

Achievements

- 1st Prize – AI Tech CODEVERSE JBIET**

Feb 2025

 - Built a Traffic Density Prediction System using statistical modelling (Linear Regression) and real-time data visualization with Leaflet.js; presented data-driven insights to a judging panel
- 1st Runner-up – Web Development, Zignasa 2k24 MLRIT**

Dec 2024

 - Developed a RAG chatbot (LangChain + Gemini) with an anti-plagiarism module using Jaccard similarity scoring; deployed as a full-stack web application with analytical results surfaced through an interactive interface
